Skills

Programming Languages: Python | Java | TypeScript | JavaScript | C++ | SQL | HTML
Tools: GitHub | Maven | JUnit | Vite | Jupyter | Flask | Three.js | MediaPipe | Ollama | Git
Data & Machine Learning Models: Pandas | NumPy | SciPy | scikit-learn | XGBoost | Matplotlib | Data Cleaning

Projects

Hand-Controlled Rubik's Cube | *JavaScript, Three.js, MediaPipe* Aug 2026 – Present

- Built a 3D Rubik's cube in the browser controlled by hand gestures through the webcam; pinching rotates the cube, and pointing and swiping turns a layer.
- Used MediaPipe hand tracking and Three.js raycasting to identify the piece under the user's fingertip; deployed live on GitHub Pages with webcam processing kept in the browser.

Scam Checker | *Java, TypeScript, Maven, JUnit* Mar 2026

- Built a rules-based scam detector in Java that flags urgency, gift card or crypto payment requests, account and government threats, requests for verification codes, and fake or lookalike links in pasted messages.
- Exposed the scanner through a REST API (POST /scan) and built a TypeScript (Vite) frontend that highlights each warning sign; wrote JUnit tests and added new rules after a delivery-fee scam scored as low risk.

llm-audit | *Python, Ollama (Llama 3.2)* Jul 2026 – Aug 2026

- Built a local HR chatbot and automated tests for PII leakage across 6 attack prompts (30 runs); cut leaks from 12/30 to 5/30 with stronger instructions and to 0/30 by removing confidential data from the model's context.
- Tested indirect prompt injection with 3 attacks and a clean control on 1B and 3B models; the 1B model obeyed every attack (15/15) despite delimiter and sandwich defenses, while the 3B model resisted all of them.

Break the Bot | *Python, Flask, JavaScript, Ollama* Sep 2026 – Oct 2026

- Created a 10-level chat game challenging users to extract a secret from a local LLM; progressively introduced rule reminders, banned-word checks, and output censorship.
- Added server-side validation for model, level, and message length; blocked user-supplied system messages and detected spaced-out or reversed secret spellings.

Adult Income Prediction & Fairness Audit | *Python, pandas, scikit-learn, XGBoost* Jan 2025 – Mar 2025

- Cleaned 30,162 census records in a team project and owned feature selection/encoding; compared logistic regression, random forest, and XGBoost using a shared 80/20 split and cross-validation. Gradient boosting achieved ROC-AUC 0.922 and 86.2% accuracy.
- Audited predictions by sex and race; implemented reweighing to reduce the logistic-regression gender prediction gap from −0.18 to −0.08 with a 0.6-point accuracy trade-off.

Work Experience

Customer Service Representative & Head Teller June 2023 – Present
CIBC *Toronto, ON*

- Process high-volume banking transactions accurately within policy and cash-control requirements; resolve client issues and recommend products through needs-based conversations.

Founder May 2023 – Present
647even *Toronto, ON*

- Built the apparel brand's website using JavaScript and HTML/CSS; manage product planning, customer communications, and sales, using customer feedback and sales data to guide product and pricing decisions.

Education

Bachelor of Science (Hons.) in Computer Science - Data Science Sep 2025 – Present
York University, Lassonde School of Engineering *ON*

- **Relevant Coursework:** Data Structures/Management, Statistical Design, Time Series Analysis, Regression Analysis
